Compact Tops (10mm thick)

A high durable, low maintenance, water resistant and strong material, compact laminate is comprised of compressed materials to form a solid surface

Aluminium Tops(20mm thick)

Aluminium is a silvery-white, lightweight metal. It is soft and malleable. Aluminium is remarkable for its low density and its ability to resist corrosion

Solid Teak Tops (18mm thick)

Teak is valuable both for its elegance and its durability designed for outdoor use.

TABLE TOP DISCRIPTIONS For tables from Page 40-47

COMPACTOP

Compactops are made from high pressure laminate, consisting of various layers of paper saturated with thermosetting resins and bonded through the combined action of heat and high pressure. The paper used on Compactop comes from production processes that conform with the FSC chain of custody. The result is a stable, non-reactive, homogenous, non-porous, antistatic, high density product, which is exceptionally tough and resistant to scratches, abrasions, chemicals and heat making them ideal for a wide range of contract applications. Available in 10mm and 12mm thick.

No specific maintenance is required other than normal cleaning. The Compactop non-porus surface can easily be cleaned and disinfected with hot water, steam and any common non-abrasive household detergents and disinfectants as long as these are not highly alkaline. **AVOID** strong acids and bases and avoid wiping with highly abrasive substances or equipment

IRON TOPS

Iron Tops are made from composite materials: a non-deformable water repellant multilayer wood based core, covered in steel. The slim line result is elegant, stylish and practical. The tough materials make Iron Tops suitable for indoor as well as outdoor use.

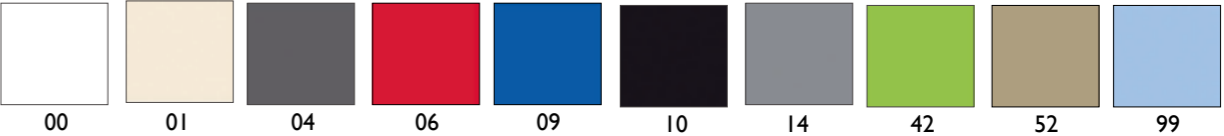

The Iron Tops do not require any special maintenance beyond cleaning. Its surface can be easily cleaned with a soft cloth dampened with water, even with household cleaning detergent provided they are not alkaline and generally aggressive. **AVOID** the use of strong acids or bases, avoid rubbing with abrasive substances or devices

Technopolymer Tops have high structural, heat and abrasion resistance. They are practical, shock resistant, colourful and inexpensive.

TECHNOPOLYMER TOPS

These tops are non-toxic, stain resistant, antistatic and UV-resistant and consequently have excellent resistance to atmospheric agents. All these materials are recyclable in the full respect of the Natural Environment. All the plastics are injected materials without chemicals and, as far as possible recycled pre-used technopolymers are sourced as a base raw material.

The plastic surface means they can be cleaned generally with a cloth and warm water. For the more persistant stains, a small amount of liquid soap diluted in water may be used. **DO NOT** use acetone, trichloroethylene, ammonia, alcoholic substances and detergents that contain even just a small amount of these substances. We also recommend avoiding all types of abrasive and solvent substances or rough sponges
